

Why Power Temp Systems?

Power Temp Systems, Inc has been delivering energy through standard and customized portable and permanent power distribution products since 1991. Represented nationwide, we provide a robust support team and innovative solutions with favorable lead times. Our innovation and can-do approach to any challenge have led to the development of patented advancements that are quickly becoming the industry standard.

Offering a full line of permanent electrical products ranging from automatic transfer switches and breakers to modular switch boards and isolation bypasses, we are the go-to source for anything related to power distribution.

Our products are...

- Safe, reliable, and user friendly
- Rugged and durable
- NEC, NFPA, and OSHA compliant
- UL / cUL 1008, 891, 1558 compliant
- cETLus listed
- All systems are seismically tested and certified

Permanent Power Distribution

Power Temp Systems, Inc. | Permanent Power Distribution Equipment

30+ Years Ensuring 24/7 Reliable Power

1 Quick Connect Docking Panels

Our Quick-Connect Docking Panels are designed to stream-line power management tasks with ease. From standard configurations to customizable solutions, our panels offer efficient and reliable power solutions for various applications. In a power outage, you can quickly, safely, and easily integrate a generator or load bank into your electrical system.

Range: 100 - 6000A

1.1 Basic Wall Mount

Our Basic Wall Mounts are centralized, durable hubs for distributing temporary and emergency power, allowing seamless connection to portable or permanent generators during outages. Equipped with 16 Series Cam connection points, they enable quick, secure setup without an electrician and integrate with transfer switches for smooth power transitions. Features such as phase rotation monitors, and tamper-resistant enclosures enhance safety and efficiency, while their robust design ensures reliable performance in various configurations and harsh conditions.

Range: 100 - 1200A

U.S. Designed & Patented Equipment

1.2 Spec Grade Wall Mount

With features like extra depth, bottom conduit access, and industry-standard 16 Series Cam connection points, our Spec Grade Wall Mounts enable quick, secure generator connections without requiring an electrician. Compatible with manual/automatic transfer switches, they ensure seamless power transitions for critical operations. Advanced safety features, including dual trapped key isolation breakers and load dump breakers, enhance load management, while their robust construction ensures durability and performance in challenging conditions.

Range: 100 - 2000A

1.3 Modular Pad Mount

These mounts are designed to provide quick connection and efficient, reliable power distribution for industrial and commercial applications. These panels are ideal for both temporary and permanent setups, offering advanced features such as trapped key isolation breakers and load dump breakers for enhanced safety and control. With flexible conduit access and durable construction, they are built to withstand harsh conditions while ensuring easy integration into existing systems.

Range: 400 - 6000A

Reputable Nationwide Sales Network

1.4 Add Ons

Also known as generator tap boxes, quick connect generator docking stations, or generator docking panels

Engineered to enhance and expand your power infrastructure, these add ons provide robust and efficient solutions for temporary and permanent power needs. These units enable safe and seamless connections to portable generators during power outages. Equipped with industry-standard 16 Series Cam connection points, they allow quick, tool-free setup without the need for an electrician. Installed at the base of an existing manual disconnect switch, transfer switch, or main circuit breaker panel, these cost-effective panels help building owners integrate portable generators or load banks into their electrical systems for reliable and uninterrupted power performance in any scenario.

Range: 100 - 800A

2 M-Gear

Also known as Switch Boards

Our switch boards offer extensive customization options, including load bank Cam connection points, allowing you to tailor the system to meet specific operational requirements. This modularity ensures that your power distribution setup is both flexible and scalable. Designed to support paralleling, our switch boards enable the integration of multiple power sources, maximizing efficiency and ensuring reliable performance during critical operations.

Range: 400 - 8000A
